TES (Thermal energy storage) can enhance energy systems by reducing
 environmental impact and increasing efficiency. Thermochemical TES is a
 promising new type of TES, which permits more compactness storage
 through greater energy storage densities. In this article, closed and open
 thermochemical TES is investigated using energy and exergy methods.

25% of global energy pollution comes from industrial heat production. However, emerging thermal energy storage (TES) technologies, using low-cost and abundant materials like molten salt, concrete and refractory brick are being commercialized, offering decarbonized heat for industrial processes. State-level funding and increased natural gas prices in key regions will drive TES a?|
