

THIEF STEALS SOLAR PANELS

How to stop solar panels from being stolen? While locks, alarms, and cameras are the 3 best ways to stop your solar panels from being stolen, there are a few methods that can deter theft and one of those is by marking or engraving your solar panels so that they are easily identifiable if they do get stolen.

Are solar panels a target for thieves? While it is not extremely common, solar panels can indeed be a target for thieves. This is especially true in more remote or isolated areas where surveillance is minimal and the solar panels can be removed with less risk of being caught.

Can stolen solar panels make money? With more than 1.4 million solar panels already in domestic properties, a figure that is expected to rise, criminals have realised a lucrative opportunity. Although copper cabling in the stolen panels can make money for thieves, panels are often easier and quicker to steal, and can be easily advertised online and sold on the black market.

Are solar panels being stolen in the UK? That figure is reported by Detective Superintendent James Taylor, head of UK serious organized acquisitive crime unit Opal, which included a rise in small-scale theft of solar panels as rising energy bills and the cost-of-living crisis bite. And the UK experience is far from unique.

How many solar panels can a thief remove? Viamon's Strecke says organized raiders typically remove 100 panels to 300 solar panels, worth at the top end. In one case, he adds, thieves removed more than 15,000 panels, 5 MW of generation capacity, in one weekend. It is organized crime, with big logistics in the background, he says.
