The best angle for solar panels in the UK is about 40 degrees from horizontal. This varies slightly around the country, but not by much. A 2019 study from York University found that the optimum angle in Yorkshire is 39 degrees, and as you'll see in the section below, there's very little regional variance across the rest of the UK.

The way a solar pv system is installed is as important as the type of panel and installer that you choose. they were not designed to take the additional weight of solar panels so anchors must be installed on every truss under the mounting rails in order to spread the load over the whole roof structure. Far too many installers fix to every

November Solar News: China's reduction in photovoltaic export tax rebates may lead to an increase in module prices, with current solar panel prices in Europe below 6 cents per watt. France plans to install about 1.35 GW of solar capacity in Q3 2024, while Trump's upcoming tariff hikes could trigger a surge in imports and rising transport costs.
