

### TWO STRINGS OF LITHIUM BATTERIES FOR SC ENERGY STORAGE

Are energy storage systems suitable for new generation lithium-ion batteries? Finally, the applicability of these suitable energy storage systems is evaluated in the light of their most promising characteristics, thus outlining a conceivable scenario for new generation, sustainable lithium-ion batteries. Can a lithium ion battery pack have multiple strings? Whenever possible, using a single string of lithium cells is usually the preferred configuration for a lithium ion battery pack as it is the lowest cost and simplest. However, sometimes it may be necessary to use multiple strings of cells. Here are a few reasons that parallel strings may be necessary:

Are lithium-ion batteries energy efficient? Among several battery technologies,lithium-ion batteries (LIBs) exhibit high energy efficiency,long cycle life,and relatively high energy density. In this perspective,the properties of LIBs,including their operation mechanism,battery design and construction,and advantages and disadvantages,have been analyzed in detail.

Why do lithium ion and lithium sulfur batteries have a porous structure? In lithium-ion and lithium???sulfur batteries, it enables the formation of porous and conjugated frameworks with tunable electronic properties while enhancing electrochemical stability. This method improves ion transport and capacity retention while addressing challenges like low conductivity and poor cycling stability in energy storage systems.

Why are lithium-ion batteries important? Among various battery technologies, lithium-ion batteries (LIBs) have attracted significant interest as supporting devices in the grid because of their remarkable advantages, namely relatively high energy density (up to 200 Wh/kg), high EE (more than 95%), and long cycle life (3000 cycles at deep discharge of 80%) [11, 12, 13].

## TWO STRINGS OF LITHIUM BATTERIES FOR<sup>SS</sup> ENERGY STORAGE

Are lithium-rich cathode batteries a good choice? In addition,the lithium-rich cathode materials exhibit high CE and EE of approximately 99% and more than 90%,respectively,surpassing other competitive battery systems(e.g.,lead???acid and nickel metal hydride batteries). In practical use,low EE will be reflected by high extra energy costs,particularly for grid-level energy storage.
