Overhead Water Storage Tank is a usual Water storage tank

There is growing concern that natural water storage is declining, the amount of built storage has declined, and what is available is ageing and waning. Over the past 50 years, more than 27,000 billion m3 of water storage has been lost due to melting glaciers and snowpack and the destruction of wetlands and floodplains.

When water is pumped from a well or some other source, it is often piped into a water storage tank. There the water can be stored until it is needed in your home. The water tank is connected to the home's plumbing, and all of the water out of the tap or the faucet comes from the water storage tank. Once you are done using water, the storage
