

# WESTERN SAHARA SOLAR PANELS FOR SALE

Do we need 100% of the Sahara to be covered in solar panels? We don't need 100% of the Sahara to be covered in solar panels. Even 20%, which is the amount that would kickstart these impacts, is not needed. Instead, a series of smaller solar farms covering 1.2% of the surface should be enough to generate enough electricity without having such extreme impacts on the environment.

Could solar power the Sahara Desert? In reality, we would harvest so much more energy than we could ever possibly need. According to Forbes, solar panels covering a surface of around 335km<sup>2</sup> would actually be enough to power the world ??? this would cover just 1.2% of the Sahara Desert. What would happen? Outside of electricity generation, this could have several consequences.

Could the Sahara be transformed into a solar farm? In fact, around the world are all located in deserts or dry regions. It might be possible to transform the world's largest desert, the Sahara, into a giant solar farm, capable of meeting the world's current energy demand. Blueprints have been drawn up for projects in and that would supply electricity for millions of households in Europe.

Could large solar farms in the Sahara Desert redistribute solar power? Large solar farms in the Sahara Desert could redistribute solar power generation potential locally as well as globally through disturbance of large-scale atmospheric teleconnections, according to simulations with an Earth system model.

Can large-scale solar farms influence atmospheric circulation in the Sahara Desert? Our Earth system model simulations show that the envisioned large-scale solar farms in the Sahara Desert, if covering 20% or more of the area, can significantly influence atmospheric circulation and further induce cloud fraction and RSDS changes (summarized in Fig. 7) across other regions and seasons.
