1. A photovoltaic bracket is a bracket, such as a solar photovoltaic bracket, which is a special bracket designed for placing, installing and fixing solar panels in a solar photovoltaic power generation system. 2. Photovoltaic brackets can be divided into aluminum alloy brackets, steel brackets and concrete brackets according to their materials.

Today Let's talk about the advantages of aluminum alloy photovoltaic brackets. 1. Natural corrosion resistance, aluminum can form a dense alumina protective layer on the surface when placed in the air, which can prevent further oxidation of solar aluminum alloy profiles. 2. Galvanic corrosion resistance.

In terms of strength, AL6005-T5 aluminum alloy is about 68%-69% of Q235 B steel. Therefore, steel is generally better than aluminum alloy in strong wind areas and relatively large spans. 2. Weight and Handling. Steel It is denser and heavier than aluminum, which can make it more challenging to handle and transport.

Threaded holes in the clamp (and stainless hardware provided) enable the easy attachment of an S-5-PV solar panel mounting system without violating the integrity of the roof or the roof's warranty. With very few exceptions, the attachment of a single Mini S-5 clamp to the roof seam will be stronger than that point of the seam on the building structure.
