

WIND FARM ENERGY STORAGE PICTURES

Does a wind turbine have built-in energy storage? At no point during the normal operation of a wind turbine is there built-in power storage. However, wind turbine operators can add power storage methods into the system, such as a battery, to store energy.

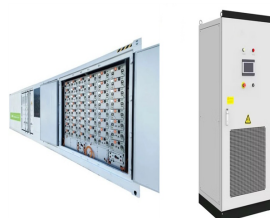

How is energy stored from a wind farm? The most common method for storing energy from a wind farm is by using large batteries to store the electricity generated by the wind farm. As the wind farm generates electricity, a charger is powered, which in turn charges the batteries, allowing the energy to be stored.

Where is the proposed Pikedale wind farm? The proposed Pikedale Wind Farm is located 18km west of Stanthorpe. The proposed project currently comprises around 200 wind turbines and battery energy storage, producing enough electricity to power around 647,000 homes and prevent 553,000 tonnes of emissions annually.
